Project Title: EXAM PORTAL

I want to design an Online Exam Portal to help students and Instructors to conduct exams. It provides a user-friendly interface for students, Instructor and Admin.

Some of the functionalities that I am planning to implement in the portal are

All users will have role-based Authentication and they can create/update their profile

Students:
1. Take Exams
2. View past Results
3. Resister for Exams

Instructors:
1. Create Exams
2. Set Time constraints for Exams
3. Publish/View Results of Students
4. Can also create/update student profile

Admin:
1. Manage Users, quizzes, questions.
2. Can also create/update both students and Instructors profile

Will try to Create a discussion board where students can post if they have any queries.
